MetaMasters Academy Manifesto

Education Beyond the Ontological Divide

Principal Architect: **Michael A. Russell**

Affiliation: **Foundation for Aligned Intelligence, Truth, and Humanity (FAITH)**

Date: November 2025

Document Version: 1.0

Abstract

The MetaMasters Academy Manifesto defines the educational philosophy, curricula, and certification pathways for cultivating ontological literacy and meta-cognition in humans. It integrates OGT, SIA, ASI, TCP, and TEM principles into a cohesive educational ecosystem that aligns human learning with the cognitive architecture of sovereign intelligence frameworks.

1. Introduction

MetaMasters Academy aims to bridge the gap between human learning and AI-aligned reasoning. The academy provides structured programs to develop advanced meta-cognitive skills, ontological literacy, and an understanding of truth-based verification systems.

2. Educational Philosophy and Mission

- **Philosophy:** Learning is structured to mirror ontological reasoning frameworks, fostering independent thought and ethical intelligence.
- **Mission:** Equip students with the cognitive tools to navigate, understand, and contribute to systems like SIA, ASI, TCP, and TEM.

3. MetaCognition Curricula

Curricula focus on:

- Cognitive self-assessment and reflection
- Recursive reasoning and problem decomposition
- Alignment with ontological frameworks (OGT and MDM)

4. Ontological Literacy Programs

Programs designed to:

- Teach foundational OGT principles
- Develop proficiency in recursive mathematical reasoning
- Cultivate the ability to evaluate and verify knowledge

5. Truth Economy Certification Pathways

- Certification based on verified contributions to knowledge and integrity within TCP
- Measurement of impact using TruthCoin metrics
- Pathways to advanced understanding of AI alignment and moral-economic principles

6. Integration with SIA, ASI, TCP, TEM

- Students gain experience interacting with cognitive ledger systems (SIA)
- Engagement with ASI frameworks for recursive reasoning training
- Practical application of Truth Economy and verification systems
